

# Shottle Hall

## The Background

Shottle Hall is set in the heart of the Derbyshire countryside. Its idyllic location makes it one of the most sort after wedding locations in Derbyshire. We replaced the existing oil heating system with a biomass heating system.

The system was designed to provide space heating and domestic hot water. We installed an ETA wood pellet boiler with ETA Tronic integrated control system to oversee the central heating and hot water throughout the venue.

## The Installation

- ETA wood pellet boiler
- ETA 4400 litre buffer tank with thermal insulation
- Custom built fuel store with auto feed system and injection stubs
- ETA– Tronic integrated control system to control all heating and hot water system, with external control screen fitted in office for easy use.
