

The Background

Lydgate Farm is an attractive 16th century listed guest house with 3 ensuite bedrooms. It is nestled in the peak district upon a fully Woking sheep and dairy farm.

Looking at expanding the accommodation to incorporate new holiday cottages it seemed an ideal time to install a biomass heating system gaining a more reliable and sustainable heat source throughout the properties whilst generating an additional income via the RHI.

The Installation

- 1 x ETA PC-32KW Pellet Boiler
- 1 x 1000 ltr Buffer tank
- 1 x ETA 6.6 tonne Pellet Store
- ETA Control Systems

The Benefits

- RHI Income Over 7 years £39,200.00
- 26.6 tonne reduction in CO2 emissions annually
